Index to Volume 79

Subject Index

A balanced way of teaching semi-circular canals, (289), 61
A hundred and one science teachers: they still live on in us, (288), 21
A safer method of demonstrating chemical equilibrium using cobalt(II) chloride, (289), 110
A useful soldering aid, (288), 116
Acid-base indicator extracted from grape peel, (286), 108
age of the Universe, The, (287), 115
alcohol, (287), 114
allelopathy, (288), 105
Alternative conceptions about the weather, (289), 65
An undergraduate project: the production of museum guides for key stage 2 pupils, (289), 103
Analogue-to-digital and digital-to-analogue conversion, (286), 51
Analysing examination statistics, (286), 47
applied science, (288), 61
Archimedes principle, (287), 124
assessment, (286), 39
Assessment of investigative work for GCSE 1998, (288), 75
Assessment of Sc1 investigations: a pilot study with PGCE students and their mentors, (288), 81
Attitudes to science: issues and concerns, (288), 27
attitudes of students, (288), 55, 27; (289), 75, 81

battery holder, (286), 114
biology education – the future, (289), 19
biotechnology – soya, (289), 51
Body Patience, (286), 106
bonding, (288), 108
Bryophytes, (286), 104

change, teaching approach, (286), 91
chemical equilibrium, (289), 110
chemistry, A-level, (288), 67
Children's learning about energy and processes of change, (286), 91
chlorinated water, (289), 111
Circles and waves, (287), 116
circulation system, (286), 101
Class size and teaching quality, (288), 47
cobalt(II) chloride, (289), 110
Coiled springs versus electric hoists, (288), 118
communications, (288), 11
Comparing pupil performance in key stages 2 and 3 Science SATs, (289), 85
computer graphics, (287), 116
Computer modelling for thinking about and controlling variables, (287), 87
Computer software for science teaching – choosing and using, (287), 19
computer-assisted graphing, (287), 55
computer-assisted learning, (287), 25
concept maps, (286), 65
conceptions, weather, (289), 65
constructivism, (286), 57; (289), 33
Cosmetics chemistry and microbiology: a school-university collaboration, (286), 99
creative writing, (286), 101; (287), 114
curriculum, (288), 27

Data-logging – a plug-and-play oxygen probe?, (287), 111
data-logging, experiments, (287), 61
observations, (287), 49
Faraday's law, (287), 122
day length, (289), 57
diffusion – liquids, (288), 109
Diffusion with a little extra!, (288), 109
digital-to-analogue conversion, (286), 51
diode characteristics displayed, (289), 118
Discussing socio-scientific issues in science lessons – pupil's actions and the teacher's role, (288), 55
Do fluoride ions protect teeth?, (288), 110
Doppler principle, (286), 125
Driver, Ros, (288), 19

ear – semicircular canals, (289), 61
Earth's radius, (286), 121; (286), 123
efficiency, (288), 118
electric cell, (288), 119
Electric circuit dominoes, (288), 116
electromagnetism and data-logging, (287), 122
Electrostatic ping-pong, (286), 127
electrostatics, (288), 115
energy, teaching approach, (286), 91
Environmental education and hearing-impaired students, (288), 101
enzyme models, (289), 105
equation of time, (289), 57
Eratosthenes, (286), 121, 123
ethnic minorities, (288), 51
examination results, (286), 47
examination strategies, (286), 81
Expanding horizons by shrinking worlds, (288), 11
Expectations of secondary science: realisation and retrospect, (289), 81
experimental and investigative science, (288), 81
Explaining stationary waves, (289), 114
eye, (288), 87

Faraday's law and a data-logger for induced emf experiments, (287), 122
Faraday's law and a data-logger (letters), (288), 10
field trips, (288), 71
Flexible visual aids – sponge enzyme models, (289), 105
Flip-top polymers, (286), 113
fluoride, (288), 110
From constructivism to social constructivism: a Vygotskian perspective on teaching and learning science, (289), 33
fundamental role of subject matter knowledge in the teaching of science, The, (286), 65
future of life science education, The, (289), 19

game, electric circuit dominoes, (288), 116
game, human biology, (286), 106
GCSE statistics, (286), 47
Geological field trips – some advice and an example, (288), 71
germination, (288), 105
Graph talk: some observations and reflections on students' data-logging, (287), 49
graphs with computers, (287), 55
greenhouse effect, (288), 93

Halliwell, Frank, (288), 21
health and safety, (288), 67
Henry Cabourn Pocklington FRS, (286), 15
How do computers affect graphical interpretation?, (287), 55
How long the days are – part 1, (289), 57
hydrostatic balance revisited, The, (287), 124

In praise of the Wheatstone bridge, (289), 116
indicators, (286), 108
Inhibition of seed germination by Eucalyptus, (288), 105
inspection findings, (286), 17
Intermolecular forces, nanotubes and dry ice, (289), 112
Internet in school science, (287), 28
Internet in science education, (287), 41
Intranet in school science, (287), 28

investigation, assessment, (288), 75
investigations, a comparison, (289), 43
iodine-clock reaction – a spreadsheet simulation to test, (287), 81
Ionisation energies (letters), (286), 10; (289), 14
Issues of safety in the school laboratory, pupil's perceptions of risk, (289), 71
IT and science teaching – the past and the future, (287), 25
IT equipment – safety, (287), 101
IT in science education, (287), 19, 25, 29, 35, 45, 49, 61, 69, 91

key stage 3 revision, (286), 140
key stage 4 IT, (287), 29
key stages 2 and 3 compared, (289) 85

language and teaching science, (288), 35
Learning science through creative activities, (286), 39
learning styles, (286), 39
Linking theory and practice: a strategy for presenting primary science activities, (286), 73
Lowering the language barrier in learning and teaching science, (288), 35

magnetic field patterns, (289), 117
magnetic fields, (286), 115
Making an inexpensive battery holder, (286), 114
Making science – the future of 16–19 physics, (289), 25
Measurement of magnetic repulsion, (286), 115
Measurement of the Earth from observations of the Sun, (286), 123
Measuring the Earth with a metre rule – or good old Eratosthenes, (286), 121
microbiology, (286), 99
Mineral water data, (289), 107
model to represent the electron shells of atoms, A, (286), 112
modelling atoms, (286), 112
modelling chromosomes, (286), 33
modelling Doppler shift, (286), 125
modelling electrons, (286), 112
modelling enzymes, (289), 105
modelling of variables, (287), 87
modelling polymers, (286), 113
modelling proteins, (286), 33
modelling semi-circular canals, (289), 61
modelling stationary waves, (289), 114
More fun with static electricity, (288), 115
museum guides, (289), 103

nanotubes, (289), 112
New data-logging tools – new investigations, (287), 61
Northern Ireland teachers' and pupils' views on 'Science across Europe', (289), 89

Obituary – Ros Driver, (288), 19
Ode to Alcohol, (287), 114
Of course America had been discovered before ..., (289), 95
OFSTED inspection findings – a tool for self-evaluation?, (286), 17
o-tolidine, (289), 111
oxygen, (287), 111
ozone hole, (288), 93

Permanent magnetic field patterns, (289), 117
physics, 16–19, (289), 25
Pocket Book computers, (287), 45
Pocklington, Henry Cabourn, (286), 15
Post 16 biology – some model approaches, (286), 33
primary school, (287), 103
primary science, (286), 73
Problem solving within the age group 5–14, (287), 103
Pupils' perceptions of radiation and radioactivity, (289), 75

Quadruple bonds – real and imagined, (288), 108
question of bubbles, A (letter), (286), 13
questioning skills, (289), 47
Questions of understanding: categorising pupil's questions in science, (286), 57

radioactivity, (289), 75
radioactivity problems (letter), (289), 14
reaction of some concentrated acids with sucrose, The, (286), 109
reaction rates, (289), 109
religious values, (288), 51
Roger the Red Blood Cell, (286), 101
role of IT in secondary school science: an illustrative review, The, (287), 35

Safety aspects of IT, (287), 101
safety – pupils' perceptions, (289), 71
SATIS factions: approaches to relevance in science education, (288), 61
SATs – student performance, (289), 85
'Science across Europe' in Northern Ireland, (289), 89
Science as a means of delivering key stage 4 IT, (287), 29
Science education and the Internet, (287), 41
Science education for the new millennium, (286), 21
Science education – vocational and general approaches, (286), 27
Science Museum, (287), 41
Science play – simple and not-so-simple diversions, (289), 120
Science teaching, culture and religious values, (288), 51
Semiconductor diode characteristics displayed on oscilloscope, (289), 118
shapes in tea cups, (289), 15
social issues, (288), 55
software, (287), 19
soldering aid, (288), 116
Solving radioactivity problems without using the decay constant, (289), 14
Soya – a plant at the forefront of biotechnology, (289), 51
special needs, (288), 101
spreadsheets, an overview, (287), 69
spreadsheets, iodine-clock reaction, (287), 81
spreadsheets, surface area to volume ratios, (286), 119
stationary waves, (289), 114
Student understanding of ionic bonding (letter), (287), 12
students' perceptions of risk, (289), 71
Studying the alternation of generations of Bryophytes in the laboratory, (286), 104
subject knowledge, teachers, (286), 65
sucrose and concentrated acids, (286), 109
Surface area to volume ratios, (286), 119

teacher exchange, (289), 95
teacher training, (288), 101
Teaching about temporary hardness in water, (288), 109
Teaching and examination strategies for A-level modular sciences, (286), 81
teaching approaches, (286), 57, 73, 81; (288), 35; (289), 25, 33, 47
teaching quality, (288), 47
Teaching safety: using mole calculations to teach aspects of safety in post-16 chemistry, (288), 67
Testing a child's concept of conservation of 'weight', (286), 121
Textbooks for key stage 3 revision, (286), 140
The art of asking questions in the teaching of science, (289), 47
The human electrical cell, (288), 119
There's a hole in my greenhouse effect, (288), 93
thiosulphate-acid reaction, a tested demonstration, (289), 109
Timing a pendulum (letters), (286), 13, 14
Titration curves: fact and fiction (letter), (286), 14
Tyndall, John, (288), 21

Universe, (287), 115
USA – teaching science, (289), 95

use of an intranet in school science, The, (287), 28
use of spreadsheets in science, The, (287), 69
Using *o*-tolidine as an indicator of chlorinated water, (289), 111

visual aid for Doppler shift, (286), 125
vocational science, (286), 27
von Wyss, Clothilde, (287), 13

W does not equal *mg* (letter), (289), 12
water hardness, (288), 109
wave motion, (287), 116
weather, (289), 65
weight, (286), 121
weight (letter), (289), 12
weightlessness, (289), 12
  demonstration, (289), 12
What's wrong with the eye?, (288), 87
Wheatstone bridge, (289), 116
Whither scientific investigations?, (289), 43
Who were they? von Wyss, C. (287), 13
  Pocklington, H. C. (286), 15
  Woodhead, T. H. (289), 16
Woodhead, Thomas William, (289), 16
Word-processors in science teaching, (287), 91
world in your pocket – using Pocket Book computers for IT, (287), 45
